## **Atlantic Diagnostics Deploys eRAD's Web-based PACS**

**Greenville, South Carolina – March 20, 2010** eRAD, an industry leader in workflow solutions through its native web-based RIS, PACS and Teleradiology software platform announced today the successful completion of an installation of its software at Atlantic Diagnostics, LLC of Tinton Falls, New Jersey.

The eRAD software will facilitate their goal of having remote access to images by both Atlantic's reading radiologists and referring physicians. eRAD's native Web-based architecture supports rules-based pre-caching of images to the workstation in advance of viewing based on a multitude of user defined criteria without the need to be connected via VPN's or other dedicated network topography. This allows for fast and efficient viewing in a distributed environment. Additionally, reports will be created using the integrated dictation and transcription workflow which is architected as part of the PACS obviating the need for a RIS or an interface to a third party solution.

"We chose eRAD primarily due to its ability to provide real-time, online access to medical reports and key images," said Radiologist and Owner Joe Triolo, M.D. "eRAD's ability to display images the radiologists annotate and mark as key within the actual medical report is a huge asset to our practice. Triolo continued, "As radiologists we spend significant effort articulating what we see in a study and as the old adage goes; a picture is worth a thousand words. The ability to select key images with a single mouse click and make them part of the medical report helps us to efficiently convey important clinical information to our referring doctors and in turn the referring MD's to their patients. We think this is a key differentiator for us in this increasingly competitive space."

### **About Atlantic Diagnostics, LLC**

Offering state of the art imaging to patients of Monmouth County New Jersey, Atlantic Diagnostic has recently installed the first MRI device of its kind in the area to address patient motion during image acquisition. Introducing 'Blade Technology' from Siemens Medical, Atlantic can now produce clear images regardless of the patient's movement which is invaluable for treating pediatric patients who would otherwise require sedation or elderly patients who may suffer Parkinson's disease. Sub-specialty reading is available for all images by board certified radiologists. For more information visit [www.atlanticmri.com](http://www.atlanticmri.com).

### **About eRAD**

eRAD® was founded in 1999 and offers a standards-based, web-centric image management solution using leading-edge technology. eRAD PACS web-accessible archive, and workflow solutions are installed in over 225 customer sites throughout the USA. eRAD's PACS and RIS solutions integrate full-featured RIS/PACS and image management with workflow tools for hospitals, clinics, imaging centers and physician practices. For more information, visit [www.erad.com](http://www.erad.com).
