Community Imaging Implements eRAD Integrated Scheduling Module with eRAD PACS

Greenville, South Carolina – October 10, 2008 eRAD, an industry leader in Radiology workflow solutions through its native Web- based PACS and Radiology Information Management Systems, announced today that Community Imaging in Wheaton and Bellwood, Illinois has become the first customer in the USA to implement eRAD's Integrated Scheduling Module in conjunction with Community's eRAD PACS. The Scheduling Module is a natural extension of eRAD's integrated workflow solutions that already includes features commonly found in RIS applications such as integrated dictation, transcription, and speech recognition. RPS Imaging of Michigan City, Indiana was the provider of the Scheduling Module as well as the eRAD PACS system.

According to Amy Wendt, Manager of Operations and Business Development at Community Imaging, "We have been delighted with the eRAD PACS since it was installed in early 2008. Now we have implemented eRAD's Integrated Scheduling Module to streamline our workflow across multiple facilities. This is a giant step toward our goal of becoming both filmless and paperless."

Jim Connors, eRAD's Vice President of Product Management, commented, "I was pleased to see eRAD meet our customer needs through technology and innovation. Community Imaging has been an excellent partner by identifying those features and attributes that are major contributors to a successful multi-site, multi-modality imaging center operation. It is rewarding to deliver functionality that truly makes a difference to the customer."

About eRAD

Founded in 1999, eRAD, Inc. offers a standards-based, web-centric image management solution using leading-edge technology. eRAD PACS Web-accessible archive, and workflow solutions are installed in over two-hundred twenty-five customer sites throughout the USA. eRAD's PACS and RIS solutions integrate full-featured RIS/PACS and image management with workflow tools for hospitals, clinics, imaging centers and physician practices.
