

For Immediate Release

United Radiology Group Goes Live with eRAD Teleradiology

Greenville, South Carolina - November 5, 2010

eRAD, a division of RadNet, Inc. (NASDAQ: RDNT), an industry leader in workflow solutions through its native Web-based RIS, PACS and Teleradiology software platform announced today the successful installation of its software at United Radiology Group of Salina, Kansas.

United Radiology, a sixteen-person radiology group in Salina, Kansas, provides primary reading services to several medical centers, hospitals and imaging centers throughout Central Kansas. Given the broad geography covered and the 24/7 nature of care delivered to many of these facilities United uses a hybrid model of onsite and remote reading to provide coverage. Additionally United recently purchased a mobile coach to provide digital mammography and bone densitometry to several of its customers.

Ray House, M.D. United Radiology Group President said, "To date, United has been running its teleradiology practice on an older, first generation system. With the addition of the mobile mammography coach and overall growth in our practice, it was becoming clear we needed to re-evaluate our technology and workflow needs. It was during this process we were introduced to eRAD's Web-based workflow platform." House continued, "With as many as twenty remote sites sending us studies on a 24/7 basis our workflow is complex and requires a certain degree of flexibility and the need to customize based on the institution. Not only did we find this capability in eRAD, it offered us lots of extra features in addition to the basic remote access like integrated report creation (dictation, transcription, speech recognition) and distribution tools which allows us to create and distribute medical reports with key images embedded to our referring physicians and institutions online in a secure manner." Additionally, eRAD will archive the images acquired by the mobile coach in their Greenville, SC data center.
