## **Lake Forest Hospital to Deploy eRAD's Web-based Technology**

**Greenville, South Carolina – November 6, 2009** eRAD, an industry leader in workflow solutions through its native Web-based RIS, PACS and Teleradiology software platform announced today the signing of an agreement with Lake Forest Hospital, Lake Forest, Illinois to deploy its native Web-based solution for managing the online distribution and remote access to medical reports and images by its referring physicians. Lake Forest, a 215-bed community hospital with eight outpatient imaging centers services more than 600 physicians and their patients living in Chicago's northern suburbs.

eRAD's technology will enable referring physicians to gain secure, real-time access to radiology reports and images online from any PC with Internet access utilizing a common browser interface. "Having successfully serviced our outpatient imaging centers needs for several years, eRAD was a natural choice to sit atop the hospital PACS which couldn't easily offer this type of secure, Web-based access," commented Joshua McElroy, Radiology Manager at Lake Forest Hospital. "This is an example of how our uniRAD solutions can add value to existing PACS implementations in a very cost-effective manner," said Seth Koeppel, Sr. VP of Sales with eRAD.

### **About Lake Forest Hospital**

Lake Forest Hospital is a 215-bed community hospital with 600 physicians board-certified in 68 medical specialties, conveniently located in offices throughout Lake County. The hospital has been named the "Consumer Choice" Hospital for Lake and Kenosha counties according to a survey by National Research Corporation for five years in a row for having the best doctors, best nurses, best image and reputation, and best overall quality.
