New release of eRAD RIS/PACS includes uniRAD™ Workflow Consolidation

Greenville, South Carolina –June 4, 2009 eRAD, an industry leader in workflow solutions through its native web-based RIS, PACS and Teleradiology software platform announced today it is releasing eRAD RIS/PACS v6.2 with uniRAD™, eRAD's proficient web-based workflow consolidation and interoperability platform. Designed to simplify dynamic environments and complex workflow, uniRAD seamlessly integrates images, reports and other data from independent, multi-vendor information systems. With individually customizable preferences and automated processes, uniRAD provides physicians with a single point of access to information stored across different systems in numerous locations.

uniRAD accommodates various external systems but does not mandate their existence. With flexible scheduling, dictation, transcription, report distribution, image and report storage options and other modules, eRAD RIS/PACS with uniRAD complements the feature sets of existing information systems. Depending on the configuration, these tools can co-exist with other solutions, allowing for quick incorporation of non-integrated imaging sites, temporary alliances or loosely associated users.

Dr. Roy W. Miller, President and CEO of eRAD, reports, "uniRAD is an enterprise-wide diagnostic IT solution with the potential to leverage customer's existing investments and bring increased efficiency, productivity and lower costs to reading groups of any size." eRAD has already implemented uniRAD installations in the USA and in Hungary.

uniRAD is designed to offer multi-site, multi-vendor PACS integration, with optional storage configurations, consolidated worklist for productivity enhancements, web accessibility to existing PACS without migration or replacement, comprehensive clinical review through automatic prior image and report retrieval from multiple disparate PACS, RIS and EMR systems, automated data management and routing, multiple discipline diagnostic viewer, co-existent report dictation, speech recognition and transcription solutions, single source, enterprise wide data analysis and reporting and programmable interface for custom integration.

About eRAD

eRAD® was founded in 1999 and offers a standards-based, web-centric image management solutions using leading-edge technology. eRAD PACS web-accessible archive, and workflow solutions are installed in over two-hundred fifty customer sites throughout the USA. eRAD's PACS, RIS/PACS and teleradiology solutions integrate full-featured RIS/PACS and image management with workflow tools for hospitals, clinics, imaging centers and physician practices.
